

- The program will output the metrics for evaluation in the same format as the baseline provided in Lab1: Bug Report Classification, i.e.
 - o **=== Sentence Transformer Results ===**
 - o **Number of repeats:** <value>
 - o **Average Accuracy:** <value>
 - o **Average Precision:** <value>
 - o **Average Recall:** <value>
 - o **Average F1 score:** <value>
 - o **Average AUC:** <value>
- As the baseline did not implement any form of random seed that could be provided as a parameter with the command, I did not include this in the program. This, however, means that the exact values given in the report may not be reproduced. Due to the averaging of multiple iterations, this variation should be minimal.
